Recent disturbing news

- Children in Indian Residential schools were subjected to nutritional experiments.
 - TB patients in the Ft. Qu'Appelle sanitarium were subjected to vaccine experiments.
- 

What types of discussion do these experiments raise?

 Ethics

Cartoon depicting expts done on children in Indian Residential schools

(cartoon shows a girl and a boy as objects under a microscope with
the caption “I hate science, too”.)

Who's missing in this picture?

(same cartoon)

● The scientist

(what on earth was he thinking?)

- 
- Would a female scientist have conducted such experiments?
 - Would a First Nation (Indian) scientist?
 - If no, why not?
- 

My Recent Letter to the Editor

- Ethical behavior – lack of guidelines is no excuse for unethical scientists.
 - These types of experiments highlight the need for more Aboriginal scientists!
- 

Congratulations!

- The Ongoing Success of the Science Ambassador Program.
 - Opening the door for Northern and Aboriginal kids to the joys of science
 - And fostering the generation of scientists with different viewpoints.
-
